Abstract

A re-transmission control method for a transmitting device that transmits a codeword generated based on a first parity-check matrix to a receiving device, and re-transmits a k-th additional parity generated based on a k-th parity-check matrix to the receiving device when receiving a NAK for the codeword or a (k-1)-th additional parity, comprising: generating a (k+1)-th parity-check matrix based on a k-th parity-check matrix; generating a generator matrix based on the (k+1)-th parity-check matrix; and generating the k-th additional parity based on the generator matrix.
